Seloc Washers

This shake-proof washer is designed to seal out air, water, lubricants and other liquid or gaseous contaminants.

Seloc washers are self-sealing, vibration-resistant washers.

This shake-proof washer is designed to seal out air, water, lubricants and other liquid or gaseous contaminants.

Seloc washers when the bolt or nut is tightened the metal serrations of the lock washer pierce the rubber and bite into the relative metal surface, and provide the necessary locking action. The rubber covering reduces

the risk of corrosion that occurs with normal lock washers as it envelopes the scores in the protective treatment on the metal face. This gives effective protection against moisture and oxidation.

Seloc washers are designed for use with regular screws or bolts for sealing panels and cases having large clearance holes or slots, and can also be used to seal openings of protrusions. Upon tightening, a seal is formed under the head of the screw or bolt as well as around the periphery of the washer face.
